SUBJECT INDEX

Absorbing films. See also Non- or weakly absorbing films
  reflectance and transmission 31-32
  transmission spectophotometry 26-30
Adsorbed films, spontaneous, external EAIR 170-171, 172
Anistrophic films
  ellipsometry 60-63, 66-67
  Fresnel coefficients 20-21
  KK transform 37-38
  reflectance and transmission spectroscopy 31-32
  SRS and modulation spectroscopies, 37-38
Anistrophy
  ellipsometry 76-77
  transmission IR measurements 137
Anode, electrochemical, surfaces
  external RAIR 173-176
Aperture slits
  Sew configurations and 102, 103-104
Attenuated total reflection (ATR). See also Multiple internal reflection (MIR) spectroscopy
  SEW configurations 101
  SPP propagation 106, 108-109

Birefringent films, reflectance microcopy with cross polarizers 79-80
Bragg diffraction 85-87, 94, 95
Broadband IR sources and SEW coupling
  adsorbed species, AG/- and Cu/- aqueous electrolute interfaces 116-117
  LB films 122
  LB mono- and multilayers 121-122
  metal under- and overlayers, MIR configuration 120-121
  polyvinyl PVAc/Cu, Otto configuration 117-118, 119
  transition metal films/ polymer surfaces, Kretschmann configuration 118-120

CARIS. See Constant angle reflection interference spectrum
Constant angle reflection interference spectrum (CARIS)
  non- or weakly absorbing films 24-25

Dichroism measurements
  circular dichroism 26
  linear dichroism 26-27, 28, 30
  U-V linear dichroism 28-29, 30
Differential modulation (DR) 43, 44
Diffuse reflectance Fourier transform (DRIFT) spectroscopy 194-195
Dipole origins, main classes 8-22
  electromagnetic dipole field mode 8
  macroscopic response to microscopic characteristics 8-11
  point dipole expansion model 8-13
    dielectric susceptibility and microscopic polarizability 10-11
    frequency dependence, parameters and complex valuedness 12-13
    generalizations from 11-12
    macroscopic response to incicent electromagnetic wave 8-10
Dipole techniques. See Electronic origin linear dipole techniques; First order induced dipole techniques; Vibrational linear dipole techniques
DR. See Differential modulation
DRIFT. See Diffuse reflectance Fourier transform spectroscopy

Effective medium approximation (EMA)
  Bruggeman's 71-72
  ellipsometry, homogeneous models 67-68
Electrochemically modulated IR spectoscopy (EMIRS) 192
Electronic origin linear dipole techniques 23-128
  ellipsometry 54-78
    applications, organic films 68-78
    experimental considerations 55-59

(Electronic...ellipsometry, cont.)
relating Δ and ψ to IM properties, modeling and 59-68
integrated optics approaches 126-128
microscopy and interferometry
interferometry, optical 81-83
microscopy, crossed polarizer 79-81
SEW techniques, electronic and vibrational 97-128
applications 99-100, 111-126
experimental configurations 100-105
spectrophotometry 23-54
photoluminescence 44-54
reflection and transmission, both possible 30-34
surface reflectance and modulation spectroscopies 34-44
transmission only possible 24-30
x-ray scattering and diffraction 83-97
concepts and applications 84-87
EXAFS and XANES 95-97
GIS 87-94
transmission x-ray diffraction 94-95
Electro-reflectance (ER), surface
interaction of large organics 41-42
microscopic structure, metal/electrolyte interface model 40
organics at metal electrode/electrolute interface 41
surface electronic properties 41
Ellipsometry (ES) 54-78
adsorption, organic films from vapor and solutions 72-74
adsorption, proteins on phospholipid LB films 73-75
anistropic films 60-63, 66-67, 76-77
applications, organic thin films 68-78
biological films 77-78
Bruggeman EMA 71-72
configuration developments 58-59
ellipsometer configuration elements 55-57
ellipsometric parameters 59-68
film properties 59-68
homogeneous model limtations 66-68
LB films 76
null configuration 56-57
organic/liquid interface 75-76
phospholipid monolayers/water 76
photometric configuration 57-58
SE data reduction 68-71
EMA. See Effective medium approximation
EMIRS (Electrochemically modulated IR spectroscopy) 192
Enhanced Raman spectroscopy
LB film applications 215-216
nanosecond time-resolved studies 215-216

SUBJECT INDEX

Adatom interactions 212-214. See also Interaction theory, chemisorbed atoms on metal surface
Adsorption
  alkali metals on semiconductor surfaces 175-187. See also Alkali metals-semiconductor interaction
  Anderson-Newns (AN) model and extended Hückel theory (EHT) 286-289
    AN model 287-288
    CuH binding energy and bond length 288-289
    EHT and parameters 286-288
  CO and H_2 coadsorption on metal surfaces 241-242
  H, dissociative and associative 256, 264-267
  H atom interactions outside Pt(111) surface 229-240
  H/Cu clusters 289-291
    linear chain model 290
    three-dimensional clusters 290-291
  H/Ni-contaminated Cu chains 291-293
  H/Ni-contaminated Cu substrates 285-293
  H/Ni-contaminated substrates 307, 309
  H-type in bridging on higher coordination sites 269
Adsorption sites, formate layers/Cu surfaces 275-283
  catalysis and, heterogensous 261-262
Alloys, binary, charge transfer effects on 139-144. See also Surface segregation, charge transfer effect on
Alkali metals-semiconductor interaction, K-Si system 175-187
  Al-Ge system 176, 186-187
  bonding and 174-175, 177
  cluster model calculations 177, 183-186
    binding energy tests, Si-K 184-185
(Alkali metals..., cont.)
    charge transfer value 185-186
    ionicity tests 183-185, 186
  K-Si system 176, 177
  metallization and 176, 177
  slab model calculations 177, 177-183
    binding energy structure of K+Si(100)-(2x1) surface 179-180
    charge density and 180-182
    K-Si(100)-(2x1) surface structure 178-179
    metallization and 183
Anderson model description, interaction of chemisorbed atoms on metal surfaces 215-221
  chemisorption and interaction functions 217
  direct interactions, adatom orbitals 218-219
  electron correlation effects 219-221
  Hartree-Fock approximation solution 215-216
Anderson-Newns (AN)
  adsorption, H/Cu substrates 286-289
  chemisorption energy and 312-313, 315
  complex energy integration method 310-311
  of impurity effects on chemisorption 307-315
    adatom-impurity atom interaction studies 307
    adatom-impurity interaction energy 312-313, 315
    H/Ni, H/Ni(Cu), H/Ni(Cu) systems 313
    H/W, H/W(Re), H/W(Ta) systems 314
    self-consistency effect on 308
    tight-binding model and Green's function formalism 308-310
Asymptotic expansion, spherical kinetic currents 24-25, 26-27, 28, 30, 32, 35
Asymptotic relaxation value, atomic surface surface relaxation 51-55
  Al(110) surface 52, 53, 54

(Asymptotic relaxation, cont.)
lead 55
Ni surfaces 53, 55
Atomic motion
Green's functions and 318, 319, 321
subspace Hamiltonian and 318-321
Atomic surface relaxation 43-55
ion scattering spectroscopy and 44
LEED and 44
oscillation damping and 44-45
point ion model of 46-48
b.c.c. Fe surfaces 47, 48
f.c.c. Al surfaces 47, 48
process near surface, layer translation and 44-45
Smoluchowski model, free electron gas surface 46-48
surface electronic structure calculation and 43-44
tight-binding model vs. 50-51
transition metal surfaces, d-band and 48-51
Atoms, chemisorption on metals 191-208, 211-226. See also Chemisorption on metals, atomic and molecular; Interaction of chemisorbed atoms on metal surfaces

Bonding, alkali metal-semiconductor surfaces 175-177. See also Alkali metals-semiconductor interaction

Catalysis, heterogeneous 253-273
chemisorption concept and 254
chemisorption trends 256-258
bond formulae 256-258
H/metal 258
covalent electronic effects and 255, 256
electron correlation effects 270-272
bonding within molecule 270
chemical bonding in H_2 271-272
H atom/metal surface interaction 270-271
electrostatic electronic effects and 255-256
frontier orbital theory, secondary ensemble effect 259-263
adsorption sites, atop vs. bridge 261-262
H adsorbed to f.c.c. crystal (111) 262-263
(Catalysis, cont.)
theory and parameters of 259-261
surface reactions and 264-270
H_2 dissociation to Cu_2 atom string 264-267
hydrogenolysis reactions, Ni alloyed with Cu 268-269
symmetries of HOMO and LUMO and 264
Woodward-Hoffman rules and 264, 267
CdTe surface electronic properties, Kalstein-Soven Green functions method 108-116. See also Electronic properties, surface II-IV compounds
Charge transfer effects, surface segregation in binary alloys and 139-144
electronic model, tight-binding Hamiltonian basis 140-143
microscopic theories and 139-140
model results 143-144
phenomenologic theories and 139
Chemisorption. See also specific topic
Anderson-Newns model, impurity effects on 307-315
change of density of states (CDOS) and 299, 302-304
computer simulations of 317-330
concept of and catalytic reactions 254-256
on contaminated b.c.c. metal 299-305
formalism 300-302
CDOS and 302
Koster-Slater impurity model 300
surface Green functions model 300, 302
formate layers/Cu surfaces 275-283. See also Electronic structure, chemisorbed formate layers/Cu surfaces
impurity effect, models and approaches 299-300
impurity energy, bonding and antibonding peaks 302, 303-305, 317-330
trends of and chemisorptive formulae 256-258
Chemisorption energies
H adsorption on Ni-contaminated Cu chains 291, 295-296
H adsorption on Ni-contaminated Cu clusters 290, 296
Chemisorption on metals, atomic and molecular 191-208

(Chemisorption, cont.)
effective-medium theory with covalent contributions (EMT-2) 193, 200-202
perturbation theory and 197, 200-201
transitional hosts and 201-202
effective-medium theory with density expansion (EMT-1) 192-193, 198-200
chemisorption energy, O/jellium surfaces 199-200
effective-medium theory with interatomic forces (EMT-4) 194, 205-207
application of 205
potential energy curces, O/Cu 207
effective-medium theory with self-consistent calculations (EMT-3) 193-194, 203-205
EMT-2 and 203
wag-mode frequency, OH/transition metal substrates 204-205
Gunnarsson-Hjelmberg method 192
Lang-Williams theory 192
limitations and utilization of methods 208
self-consistent jellium calculations and 192, 193, 194-198
adsorbate-induced dipole moments and 196-197
applications to date 194-195
O-jellium surface calculations 195-196
potential energy curves and 198
qualitative results extracted 195
theoretical problem perspectives and theories 191-192
Computer simulations of chemisorption 317-330
GaAs(110) surface 325-326
Al As at origin 329
As at Ga-Ga bridge site 327-328
Cl/GaAs(110) 326-327
Cu at As-As bridge site 330
O/GaAs(110) 327
Zn at As-As bridge site 329-330
Green's functions and atomic motion at surface 318, 319, 322
molecular dynamics computer simulations 321
subspace Hamiltonian, atom 318-321
theorems and 318-321, 324
tight-binding Hamiltonian and 322
CRYSTAL computer program. See Crystal surfaces, ionic, Hartree-Fock characterization
Crystal surface electron structure, surface Green function formalism
image potential barrier and 87-88
step barrier and 85-86
Crystal surfaces, ionic, Hartree-Fock characterization 119-136
alumina slab energy and population data 129
band structure for bulk corundum 132-133
bulk corundum density maps vs. surface electronic structure 131-132
chemical effects and 123, 126
cluster approach 120
corundum slab surface and 121-122
densities of state, bulk and slab corundum 132, 133-134
electrostatic effects and interactions 122-123
electrostatic terms, role in calculation 124-129
computational data for corundum 125-126
corundum (0001) surface, electrostatic potential 128-129
MgO(011) surface, electrostatic potential 126-127, 128
missing layers effect 126
repeat units and 125, 126, 127, 128-129
slab approach 120-136
surface states corundum (0001) 135

Diffusion currents
electrode reaction and 17
symptotic and asymptotic solutions of 18
theoretical treatments of 17-18
two-point Pade approximations 18, 29-32. See also Kinetic currents, two-point Pade approximants
Dimensionless parameters method and spherical diffusion problem
boundary value problem and 19-21
first-order correction 21-22
fixed concentration of depolarization at electrode surface 19
homogeneous equations solutions and 19-20
non-homogeneous equations solutions and 21-22, 25
second-order correction 22

Effective-medium theories (EMT), chemisorption on metals. See also Chemisorption on metals, atomic and molecular
EMT-1, with density expansion 192-193, 198-200
EMT-2, with covalent contributions 193, 200-202
EMT-3, with self-consistent calculation 193-194, 203-205
EMT-4, with interatomic forces 194, 205-207
EHT. See Extended Hückel theory
Electrode reactions, kinetic currents and
asymptotic expansion 34
irreversible slow reaction 23
standard expansion at electrode surface 34
Electron theory of surfaces, surface Green function formalism and 84
crystal surfaces and 85-88
systems with interfaces and 88-90
Electronic properties, surface, II-IV compounds, Kalstein-Soven method
band structure formalism and 108-110
surface Green's functions for CdTe and 110-116
Electronic structure, chemisorbed formate layers/Cu surfaces 275-283
adsorption geometries, formate/Cu (110), (100) 278-280
electronic states energy distribution, calculations 280-282
energy positions and orbital types at zone center 281-282
molecular orbital energies in HCOOH and HCOO 276-277
non-empirical atomic orbital methods, within two-center approximation 276
valence molecular-orbital symmetries, isolated formate radical 277
Electronic structure calculations, semi-infinite solid surface 57-79
bulk electronic calculations and 57-59
density functional theory and 57
embedding methods of 73-79
Green function at surface 64-70
Green functions and matching wave functions 70-73
(Electronic structure..., cont.)
wave function in semi-infinite systems 59-64
Embedded cluster model
alkali metals on semiconductors 183-186
interaction of chemisorbed atoms and 215-216
Embedding method, electronic structure, semi-infinite surface 73-79
actual wavefunction value, surface region 74
application to LCAO Hamiltonian 77-79
Dyson equation methods, comparison with 76, 77
embedding potential and 74-76, 78-79
Green function in surface region 74-75
Hamiltonian expected value, surface plus vacuum region 73-74
surface density of states and 75-76
Extended Hückel theory (EHT) 286-289

Field emission from surface states, tunnelling and 99-105
potential profile and 99
semi-classical approach and 99
surface Green function techniques and 98-99
surface state tunnelling and 99-100
tunnelling from gap states and 101
vacuum region surface states (VSS) 100-103

Green function at surface, electronic structure calculations in semi-infinite solid surface 64-70
for continuum states 64-65
Dyson's equation calculation and 68, 69, 70
linear combination atomic orbitals (LCAO) scheme 65, 68-69
local density of states and 66-67
recursion method of construction 66-68
tight-binding Hamiltonian methods and 65-66, 68, 69, 70
Green function formalism, impurity effects on chemisorption and 308-310
Green function matching and wavefunction, electronic structure of semi-infinite surface 70-83

(Green function matching...,cont.)
apllications of 72-73
method 70-71
in step model of surface potential 71-72
Green function method of Kalstein-Soven, surface electronic properties of II-IV semiconducting CdTe 107-116
band structure formalism and 108-110
surface Green function for 110-116

H adsorption on Ni-contaminated Cu
Cu chains 291
localized orbitals and energies 293-294
two impurity atoms and 294-295
Cu clusters 296
Hartree-Fock characterization of ionic crystal surfaces. See Crystal surfaces, ionic, Hartree-Fock characterization
Hybridization, localized modes in finite tight-binding chains 155-170
depth effects 165-170
of antisymmetric modes 167, 169-170
of symmetric modes 167-168
surface and midpoint energy and wavefunction changes 165-167
eigen problem, localized modes 159-163
antisymmetric impurity mode solutions 159-160, 163-164
conditions for LB mode 160-161
symmetric and impurity modes and solutions 159, 162, 163
electronic energy spectrum changes and 156
model 156-159
impurity problem and 156-159
N-process and 159
perturbation parameters and 158
surface problem and 156-159

Image portential barrier, crystal surface electron structure and 87-88
Impurity effects
on chemisorption 307-315. See also Anderson-Newns model of impurity effects
chemisorption on contaminated b.c.c. metal 302, 303-305
Koster-Slater model 300, 308

Impurity modes
antisymmetric
eigen problem in localized 159-160, 163-164
hybridization 159-160, 163-164, 167, 169-170
symmetric
depth effects and 167-168
eigen problem in localized 159, 162, 163
Interactions
alkali metals-semiconductors, K-Si system 175-187. See also Alkali metals-semiconductor interaction
Anderson model description 215-221
chemisorption and interaction functions 217
direct interactions adatom orbitals 218-219
electron correlation effects 219-221
Hartree-Fock approximation solution 215-216
multiple orbital adatoms 218-219
chemisorbed atoms on metal surfaces 175-187
embedded cluster model 221-226
analytical results, free electron substrate 223-224
application to H/Ni(110, H/Pd(110) H/Fe(110) 225-226
effective medium theory and 221
formalism 222-223
H/Ni(111) system 224-225
jellium model and 221
FIM studies, adatom interactions 212-213, 217-219
indirect interaction studies 213-214
LEED studies, ordered structures 212
oscillatory interactions, molecules chemisorbed on metal surfaces 229-250. See also Molecules chemisorbed on metal surfaces
single-adatom problem 214, 219
two-adatom problem 214
Interface, semiconductor/metal, surface Green function and 86
Interface resonances, surface Green function and 88-89
Interface states, surface Green function and 88
Ion scattering spectroscopy, in atomic surface relaxation 44

Kinetic currents, electrochemical 17-37
cases (A)-(C) 23-24
asymptotic expansion 30, 35
average currents formula and 33-34, 35
instantaneous currents 30
diffusion current ratio and 26-27
dimensionless parameters and diffusion problem 19-22
first-order correction 23, 25-26
two-point Pade approximants and 27-33
with or without spherical corrections 22-27
Koster-Slater impurity model, in chemisorption on contaminated b.c.c. metal 300, 309

LEED. (Low energy electron diffraction)
Low energy electron difrraction (LEED)
calculations, wavefunction matching in 64
electronic structure and surface Green function formalism and 90-91
LEED intensities and 91-92

Molecules chemisorbed on metal surfaces, oscillatory interactions of 229-250
adsorbates with virtual bound states, role in tunnelling 243-244
CO and H_2 mixed system outside metal surface 240-243
coadsorption, CO and H_2/Ni(100) 241-242
coadsorption, CO and H_2/Rh(100) 240, 242
H atom interactions outside Pt(111) surface 236-239
adsorption mechanism 239-240
experimental data and 236-237
model 238-239
surface plasmon/physisorbed atom pair interaction ourside planar metal surface 245-250
theory of indirect oscillatory interactions 230-232
thermal desorption as coverage function 232-236, 245, 250
image theory 232-234, 248-251
molecular virtual bound state and oscillatory interactions 234-236, 241

Oscillatory interactions, molecules chemisorbed on metal surfaces 229-250. See also Molecules chemisorbed on metal surfaces

Pade approximants, two-point 18, 29-32 See also Kinetic currents, electrochemical
asymptotic expansion coefficients a_1 and c_1 for 29-30, 35
coefficients of, cases (A)-(C) 28, 29, 32
relative percentage errors for 31, 32, 35
versus exact values 30
Pairing picture, silicon surface (2x1) reconstruction. See Silicon surfaces (2x1) reconstruction, pairing picture
Photoemission, surface Green functions and 92
differential cross-sections and 92-94
one-step formulas of 93-94
standard theoretical interpretation, three-step model 92-93
Self-consistent caculations, effective-medium theory and 193-194, 203-205
SGF. See Surface Green function
Silicon surfaces (2x1) reconstruction, pairing picture of 147-154
formal mathematical framework of 150-153
investigational surfaces, Si(111), (110), (100) 148, 149-150
pairing theorem and selection rule in 148-150
phonon problem in solids and 153
selection rule applications 153
Si(110) reconstruction 153-154
Slab model calculations, akali metal-semiconductor interactions 177, 177-183
Smoluchowski model, atomic surface relaxation and 46-48
Spherical currents, kinetic currents
asymptotic solution 24-25, 26-27
first-order spherical correction 23-25
standard solution 24-25, 34
Step barrier, crystal surface electron structure and 85-87
Superlattices, surface Green function formalism and 89-90

Surface Green function (SGF) 83-94. See also Green function
formalism 84
electron structure of crystal surfaces and 85-88
electron structure of systems with interfaces 88-90
LEED and 90-92
photoemission and 92-94
matching Green function, surface as continuum 70-73
in semi-infinite solid surface 64-70
surface interface as part of system 83
surface properties of II-IV compounds and 107-116. See also Green function method of Kalstein-Soven
Surface relaxation
LEED intensity analysis and 44-46
point-ion model 46-48
Al and Fe surfaces 47, 48
crystal electrostatic energy calculation 46
tight-binding model
asymptotic relaxation value and 51-55
multilayer oscillatory relaxation and 51
transition metal d-band and 48-51
trends of 43-45
Surface segregation in binary alloys, charge transfer effects on 139-144
Cu_xNi_y (y=1-x) alloy systems 140
electronic model, tight-binding Hamiltonian basis 140-143
microscopic theories and 139-140
model results 143-144
phenomenologic theories and 139
Surface state energies, surface Green function and 85
Surface vs. bulk densities of states, surface Green function and 85-86
Taylor expansion, kinetic currents 29, 30, 32, 33, 34, 35
Thermal desorption, oscillatory interactions of chemisorbed molecules/ and metal surface and 232-236
Tight-binding chains, finite hybridization of localized modes 15-17
Tight-binding model
atomic surface relaxation and 48-55
asymptotic relaxation value
multilayer oscillatory relaxation and 51-55
transition metal d-band and 48-51
versus point-ion model 50-51
impurity effects on chemisorption and 308-310
Tunnelling
adsorbates with virtual bound states in, role of 243-244
field effects on surface states and 98-99
field emission from surface states 99-105
surface state 97-105
surfaces states in field emission process 97-98

Wave functions, in semi-infinite systems 59-64
bulk Schrodinger equation solution and 59, 60, 62, 63, 64
density of states and 60-62
Green function and 70-73
one-dimensional potential case and 60-62, 63
three-dimensional case 62-64

SUBJECT INDEX

Adatoms, effect on atom-surface scattering process 67-74
Adsorbates. See also Resonance occupation effects on adsobates.
  electron spectroscopies and valence resonance relaxation 82-85
  intra-adsorbate electronic transitions 77-79
  polarization properties, valence resonance occupation effect on 79-81
  resonance occupation effects on 75-85
Adsorption
  diatomic energies and analysis of 181-198
  effects of adsorbed atoms 63-74
    ionization probability calculation, unrestricted H-F formalism 65-67
    Na-Na/W(110) system and 67-74
  effects on charge transfer, atom-surface scattering 63-74
  ionization probability and 65-73
  Na-Na/W(110) system and 67-74
Atom-surface scattering. See also Resonance charge transfer, atom-surface scattering.
  adsorption effects on resonance charge transfer 63-74
  Auger transitions and 23
  classical mechanics 22
  ion neutralization and 23-24
  noble-ion-backscattering 22-23
  resonance charge transfer in 19-45

Band effect, electron transfer probability 49-52
  Anderson Hamiltonian, time-dependent 49
  energy-level crossing 51-52
  resonance tunnelling and 50-51, 52-53
  time-developing operator and 49-50

Charge transfer. See Resonance charge transfer, atomic scattering.
Chemisorption studies, embedded cluster methods 166-174
Cluster models. See Embedded cluster models.
Clusters. See also specific categories.
  embedded clusters 166-174
  metal clusters, atomic and electronic structure 149-157
  microclusters, atomic and electronic structure 147-162
  semi-conductor clusters, Si_6 and Si_{10} 157-161
  transition-metal clusters 178-180
CNDO (complete neglect of differential overlap) method and parameters 214-215. See also Defects, electron and hole, in halide alkali earths.
Coulomb repulsion, intra-atomic
  excited states, scattered atoms, formation of 39-40
  Hartree-Fock method and 36-37
  time-dependent coupled-cluster approach 37-39

Defect, surface and chemisorption studies 166-174. See also Embedded cluster methods, surface defect and chemisorption studies.
Defects, electron and hole, in halide alkaline earths
  cluster models, BaFBr 215-218
    band structure 217
    defect centers, properties of 217-218
    density of unpaired electron on defect centers 217
    one-electron energies 215-216, 218
    valence band edge energies and 215-216, 218
  CNDO method and parameter selection 214-215, 219

Diatomic energies, analysis of adsorption and coadsorption and 181-198
adsorption and reaction of CO 181-183
cluster model 182
molecular orbital model 181, 182, 188-189, 191, 193, 195, 197
Fe_{12}-CO 4-fold 190-192, 193
Fe_{12}-CO on-top 189-191, 193
Fe_{12}-H results 186-189
Fe-H results 185-186
H-Fe_{12}-CO 192-195
H-Fe_{12} 4-fold 194, 196, 197
MINDO/SR calculational procedures
atom cluster and 183
Fe atomic and bond parameters 183-184

Electronic energy levels, semiconductor clusters 159-160
Electronic friction, metals and metal surfaces
energy distribution function 3, 12-17
energy transfer rate 7-12
model, one-electron states 3-5
time-dependent one-electron states 3, 5-7
Electronic states, Ni(001) surface atom 201-212
calculations
configuration interaction (CI) wave functions formulation 205
molecular orbital 203-204
self-consistent field (SCF) 202-203
charge transfer, sp- to d-band 202
CI calculations and results
SCF-MO basis, d^9 configuration 207-210
vs. interaction of states calculations, valence electronic energies 207, 208
wave functions formulation 205
d-occupation and 202
interaction of states 208, 210-211
results
CI calculations 205, 207
SCF energies, d occupancies of states 205-206
unrestricted SCF (USCF), relaxation effects and 205, 206-207
spin states 212
Electronic transitions, adsorbate intra-adsorbate 77-79, 80
valence resonances and 76-77
Electrons
defects of, halide alkaline earths 213-219
model of 3-5
one-electron states, time-dependent 3, 5-7
Electron transfer, adparticle and surface, in surface dynamical processes 47-60
band effect on dynamical charge exchange probability 49-53
coupling with medium effect 57-60
boson system and 59, 60
phonon-mediated system 59-60
time-dependent Hartree approximation and 57-58, 59
field-induced desorption and charge exchange process 53-57
quantum mechanical treatment vs. simplified models 48
Embedded cluster methods, surface defect and chemisorption studies 166-174
applications of 167
approach assumptions 173
energy band methodologies 166, 173
Green's function approaches 168, 173
lattice periodicity and 167-168
perturbative approach 173
finite cluster methods 166-167
general formalism 168-172
canonical transformation 170
Hartree-Fock approximation 169
local orbital problem and 172
many body Hamiltonian, Born-Oppenheimer approximation 168-169
zero order problem and 170-171
strong interactions method 167-168
supercell method 168
Empirical tight-binding Hamiltonian. See also Semi-conductor interfaces, nonideal, tight-binding model.
eigenvalues for fitting procedure 118
surface Green functions matching 118-119
Energy. See also specific categories.
cohesive energy, transition metal clusters 176-177, 178, 179

(Energy, cont.)
diatomic energies, adsorption and co-adsorption analysis 181-198
Energy distribution function, friction in metals 3, 12-17
boson approximation and Debye-Waller factor 14-16
perturbation, diagonal and non-diagonal 12-13
perturbation excitation 12
Energy exchange, classical trajectory model and 91-92
Energy transfer processes, surface and substrate 2
Energy transfer rate, electron friction in metals 7-12
classical result 11
integral calculation of 8-9
time-dependent dissipation rate 10
velocity dependence dissipation rate 10-11
ETB. See Empirical tight-binding Hamiltonian.

Field-induced desorption (FID), charge exchange process
adiabatic and nonadiabatic surface of system 53
barrier height determination 54-55, 57
reaction rate determination 55-57
Friction. See Electronic friction.
Fusion research, charge exchange processes and 20

Harmonic oscillator. See also Surface reaction dynamics, harmonic oscillator.
classical trajectory model and 89-93
quantum molecules and 93-98
Hartree approximation, time-dependent (TDH) 57-58, 59
Hartree-Fock (H-F) approximation, finite cluster methods and 166
Hartree-Fock (H-F) formalism
ionization probability and unrestricted 65-67
Na-Na/W(110) systen and 69-74
Hartree-Fock method
intra-atomic Coulomb repulsion and 36-37
one-electron H-F method 214, 219

Interaction of states, Ni(001) surface atom, 208, 210-211
Interface response theory, discrete superlattices
continuous response function and 115
general theory 104-133
general equation for 108
interface response operator $\overleftrightarrow{A}$ 107-108
matrix elements of response function $\overleftrightarrow{g}$ 108-113
N-layered supperlattice definition 104-105
physical properties of N-layered superlattices 112-113
response functions 105-107
simple models, exact solutions 113-114
Interfaces, semi-conductor. See Semiconductor interfaces, nonideal, tight-binding model.
Ion-survival probability, oscillatory 40-45
Ionization-level occupancy as function of time, atom-surface scattering charge transfer and 68-69
Ionization probability
calculation, unrestricted H-F formalism and 65-67
charge transfer in atom-surface scattering and 69-73
as function of incident atom kinetic energy 69-71
versus work function 71-73
H-F formalism, unrestricted 65-67

Na-Na/W(110) system and 69-74

Jellium model, spherical, alkali metal clusters and 150, 151

Lattices
ionic, defects in and CNDO method 214
superlattices, discrete 103-115

Microclusters, atomic and electronic structure 147-162
computers and computation technique advances 148
dynamical properties of 161-162
electronic shell structure, alkali and noble metal clusters 148
metal clusters 149-157
cluster ions, positive and negative, mass spectra 149
liquid drop model 150, 155-156

(Microclusters, metal...,cont.)
magic number in sodium clusters 149
multiplets formation, ground state stabilization 152
nonspherical perturbation 153-155
shell correction, deformed metal clusters 155-157
shell effects in alkali metal clusters 155-157
spherical jellium model, alkali metal clusters 150, 151
spin polarization and stabilization 151
semi-conductor clusters, Si_6 and Si_{10} 157-161
electron densities 160-161
electronic energy levels 159-160
reconstruction, atomic 157-159
MINDO/SR 183-184. See also Diatomic energies, calculational procedures.
Molecules
molecule-surface scattering, generic 89
quantum, harmonic oscillator and surface reaction dynamics 93-98

One-electron Hartree-Fock method 214, 219
One-electron properties, adsorbate/surface, perturbative approaches to 173. See Embedded cluster methods, surface defect and chemisorption studies.
One-electron theory
model, one-electron states 3-5
time-dependent one-electron states 3, 5-7
Oscillatory ion-survival probability 40-45

Perturbation
diagonal and nondiagonal 12-13
nonspherical, microclusters and 153-155
time-depdendent diagonal and non-diagonal 2, 3-5

Quasi-one-dimensional chains, ab-initio self-consistent field (SCF) theory 137-142
extension of formalism and procedure 142
(Quasi-one-dimensional chains, cont.)
formulation of method
ab-initio SCF LCAO 137
Dyson equation and 138-139
Green matrices and 138
numerical procedure 139-141

Relaxation effects and structural stability, transition-metal clusters 179
Relaxation mechanisms, intra-adsorbate electronic transitions 77-78
Resonance charge transfer in atom-scattering
adsorption effects of adsorbed atoms 63-74
ionization probability calculation, unrestricted H-F formalism 65-67
Na-Na/W(110) system and 67-74
Coulomb repulsion, intra-atomic 36
excited states, scattered atoms, formation of 39-40
H-F method 36-37
time-dependent coupled-cluster approach 37-39
one-electron theory 24-36
atom-surface system, time-evolved state of 30-33
charge state, sputtered atoms 27-29
low-temperature nearly-adiabatic limit 26-27
parallel motion effect 35-36
reflection, Na from W(110) 33-35
semi-classical approximation 29-30
time-dependent A-N Hamiltonian 24-26
oscillatory ion-survival probability 40-45
Resonance occupation effects on adsorbate, dynamical electronic properties and 75-85
adsorbate electronic transitions, valence resonances and 76-77
electron spectroscopy, adsorbates and valence resonance relaxation 82-85
intra-adsorbate electronic transitions 77-79, 80
classification of 77
relaxation mechanisms of excitations 77-78
valence resonance occupation effect, polarization of adsorbates 79-81

Self-consistent field theory, ab-initio, quasi-one-dimensional (1D) chain interfaces 135-142. See also Quasi-one-dimensional (1D) chain interfaces.
applications of 136-137
Green's matrix formalism and 136
Koster-Slater method, ab-initio, H-F self-consisitent field 136
linear bomcination of atomic orbitals, ab-initio fully self-consistent method 135
Semi-conductor interfaces, nonideal, tight-binding model 117-132
empirical tight-binding calculations 118-119
practical application, Ge-GaAs(110) heterojunctions
ideal (100) interface Ge-Ga case band structure 124-125, 131
ideal Ge-As case 126, 130
ideal interface model 124
local changes of density of states 129-130
stoichiometrically mixed model 124, 127-129, 131
valence band and 125
problem formulations, SGFM formulae and 119-123
atomic layers, definition of corresponding 119
ideal vs. nonideal interfaces 119-120
surface Green function matching and 118-119
Sputtering and charge transfer 20, 21
Superlattices, discrete
continuous response function theories of 115
N-layered superlattices 105
bulk response function, each submaterial K 105-106
physical properties of 112-113
reference response function $\overleftrightarrow{g}$ of 106-107
slab K , one homogeneous material 104
slab N of different homogeneous material 105
superlattices, polytype 105
Surface Green function matching formalism (SGFM), semi-conductor interafces and 118, 119-123, 131-132
Surface reaction dynamics, harmonic oscillator and 87-98
(Surface reaction...,cont.)
classical trajectory model 89-93
energy exchange, translational to vibrational 92-93
molecule-surface scattering, generic 89
potential energy surfaces and 89-91
trajectories for vibrationally cold O_2 molecule 91-92
harmonic oscillator, molecule-surface reactions and 88-89
quantum molecules 93-98
classical vs. quantum harmonic oscillator 93
Frank-Condon picture, vibrational state distribution 95, 98
Poisson distribution of excited states 93-95, 98
quadratic potential propagation 95
vibrational state distribution 90, 95-96, 98

TDH. See Time-dependent Hartree approximation.
Time-dependent Hartree (TDH) approximation, charge exchange process and 57-58, 59
Transition-metal clusters 175-180
bond length and 177, 178
cohesive energy and 176-177, 178, 179
magnetic order and 180
relaxation effects and structural stability 179

Valence resonance occupation effect, adsorbate polarizability and 79-81
Valence resonance relaxation, electron spectroscopy of adsorbates 82-85

XANES (X-ray adsorption near edge structure). See Adsorbates, electron spectroscopy.
XPS (X-ray photoemission spectroscopy). See Adsorbates, electron spectroscopy.
